

CHAPTER 1: Gathering & Analyzing Information.....	1
Introduction.....	2
Problem Statement.....	3
Aim & Objectives.....	4
Scope (what and what not to consider)	5
Research Questions (for R & D project)	6
Methodology.....	7
Definitions, Acronyms and Abbreviations.....	8
CHAPTER 2: Software Requirement Specification	9
Literature Review.....	10
Stakeholders List.....	10
Domain Requirements.....	11
Functional Requirements.....	12
Non-Functional Requirements.....	13
CHAPTER 3: Analysis	14
Introduction.....	15
Use cases.....	16
Use case diagrams.....	17
Data flow diagram (level 0 and 1).....	17
CHAPTER 4: Design.....	18
Introduction.....	19
Software Architecture Diagram.....	20
Class Diagram.....	22
Database Diagram (ERD).....	23
Sequence Diagram.....	24
CHAPTER 5: Graphical User Interfaces.....	25
This chapter shows how the system looks to the user. All major modules defined in Chapter 4 must appear here.	
Overall Interface Structure	
• Layout structure (Header, Sidebar, Footer, Main Panel) • Navigation style (Top menu / Sidebar / Tabs) • User role-based access (Admin, User, Guest)	
5.1 Typical Screens to Include (Depending on project type)	

- Login Page
- Registration Page
- Dashboard
- Profile Page
- Admin Panel
- Data Entry Forms
- Reports / Output Pages
- Search & Filter Screens
- Update/Edit Screens
- Delete Confirmation Screen
- Error Message Screens
- Success/Confirmation Screens

5.2 Navigation & Workflow Explanation

- How user moves from one screen to another
- Menu structure explanation
- Flow of performing one complete task
- Example:
 - Login → Dashboard → Add Record → Save → Confirmation

5.3 Form Design & Validation

- Required vs optional fields
- Error messages
- Input constraints
- Field validation examples

5.4 Reports & Output Interface

- Sample reports layout
- Tables, charts, summaries
- Print/export options (if any)

5.5 Role-Based Interfaces

- Admin interface screenshots
- User interface screenshots
- Differences between roles

CHAPTER 6: Testing.....26

6.1 Introduction

Testing objectives

6.2 Testing Strategy

- Manual / Automated testing
- Black Box testing
- White Box testing (if applicable)
- Tools used (if any)

6.3 Types of Testing Performed

- Students should clearly mention which types were performed

- Unit Testing (Testing individual modules)
- Integration Testing (Testing interaction between modules)
- System Testing (Testing complete system)
- User Acceptance Testing (UAT) (Testing by real users)
- Validation Testing (Testing input validations)

6.4 Test Plan

Include:

- Features to be tested
- Testing approach
- Testing environment
 - Hardware
 - Software
 - Browser
 - OS

6.5 Test Cases (Core of Chapter 6)

Each test case should include:

Test Case ID	TC-01
Test Scenario	Login with valid credentials
Input Data	username, password
Expected Result	Login successful
Actual Result	Login successful
Status	Pass

Students should include multiple test cases for:

- Login
- Registration
- Add record
- Update record
- Delete record
- Report generation
- Invalid inputs

At least 10–20 proper test cases (depending on project size).

6.6 Test Results & Analysis

- Summary of testing results
- Number of passed/failed test cases
- Bug corrections (if any)
- Performance observations

6.7 Error Handling & Debugging

- Types of errors encountered
- How they were resolved
- Tools used for debugging

6.8 Limitations Found During Testing

- System limitations
- Performance constraints

- Areas for improvement

CHAPTER 7: Conclusion and Future work.....27

7.1 Introduction

- Brief recap of the project objectives

7.2 Summary of Findings / Achievements

- Discuss what the system achieved
- Link back to objectives from Chapter 1
- Highlight major functionalities completed
- Mention any performance improvements or advantages over the existing system

Example points:

- Automated user management reduced manual errors
- Reports can now be generated quickly
- GUI improved usability for end users

7.3 Challenges / Limitations

- Describe issues faced during development
- Functional limitations (e.g., module not implemented)
- Technical limitations (e.g., limited resources, hardware/software constraints)
- Time constraints if relevant

7.4 Future Work / Recommendations

- Suggestions for system enhancement
- Modules that can be added in next version
- Technology upgrades (e.g., migrate to mobile app, cloud hosting)
- Performance improvements
- Security improvements
- Scalability options

Example points:

- Add mobile app interface
- Integrate with external APIs
- Include analytics dashboard
- Add role-based access for multiple departments

7.5 Conclusion

- Overall evaluation of the project success
- Confirmation that objectives were met
- Key learning points for students
